**Warm-Up Activity**

Assessing: FT-F-1

Use the following Unit Circle to help answer questions 1-3. **Treat this like a quiz** because it will help me assess how much the class understands. Do not collaborate with others in the class. When you have completed the warm-up activity, **write your 3 answers on different sticky notes with the question number specified.** Afterwards you can look over your personal unit circle and look for patterns or think of tricks to help you remember the labels on it.

1) What is the radian measure of $\angle BAC$?

2) What is the degree measure of $\angle BAC$?

3) What is the length of arc BC? (The arc that does not pass through points E and D)

Sticky note example:
